Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

1. (Previously presented) A method of providing an identifier for a file, said method comprising:

accessing said file;

deriving a frequency representation of a portion of the entire set of data for said file;

providing a file name for said file wherein said file name is representative of the entire set of data for said file;

providing said file name in a directory wherein said directory is accessible for retrieving said entire set of data for said file;

associating said frequency representation of said portion of said file with said file name so that said frequency representation is searchable within said directory for use in locating said file.

- 2. (Original) The method as described in claim 1 wherein said frequency representation comprises a Fast Fourier Transform.
- 3. (Previously presented) The method as described in claim 1 and further comprising:

configuring an address listing with an identifier for said frequency representation serving as metadata in said address listing.

Appl. No. 10/002,290 Amdt. dated July 21, 2005 Preliminary Amendment

4. (Previously presented) A method of searching for a video file, said method comprising:

obtaining a first frequency representation of a desired video file;

accessing a first unknown file;

obtaining a second frequency representation of said unknown file;

comparing said first frequency representation with said second frequency representation; and

determining from said comparing whether said unknown file is said desired video file;

eliminating said unknown file as a redundant file.

5. (Previously presented) The method as described in claim 4 wherein said obtaining said first frequency representation of said desired video file comprises:

performing a Fast Fourier Transform algorithm.

- 6. (Original) The method as described in claim 4 wherein said obtaining said first frequency representation comprises performing a Discrete Fourier Transform.
- 7. (Original) The method as described in claim 4 wherein said comparing said first frequency representation with said second frequency representation comprises:

comparing a range of frequencies of said first and second frequency representations.

8. (Original) The method as described in claim 4 and further comprising: decoding said unknown file.

Appl. No. 10/002,290 Amdt. dated July 21, 2005 Preliminary Amendment

9. (Previously presented) A method of determining redundancies in a content object directory, said method comprising:

accessing a plurality of files stored on a memory, wherein each of said files is configured so as to be identified by a fingerprint;

for each of said files, determining said fingerprint;

establishing a redundancy standard so as to indicate whether any two of said fingerprints of said files having non-identical fingerprints are redundant of one another;

comparing said fingerprints determined for each of said files;

determining redundant files based upon said comparing said fingerprints and said redundancy standard.

- 10. (Original) The method as described in claim 9 and further comprising: deleting at least one redundant file from said memory.
- 11. (Original) The method as described in claim 9 and further comprising: utilizing a Fast Fourier Transform algorithm to compute said fingerprint.
- 12. (Original) The method as described in claim 9 and further comprising: utilizing a watermark as said fingerprint.
- 13. (Original) The method as described in claim 9 and further comprising: utilizing cyclical redundancy check data as said fingerprint.
- 14. (Original) The method as described in claim 9 wherein said accessing a plurality of files comprises:

accessing a plurality of files comprising video data.

15. (Original) The method as described in claim 9 wherein said accessing a plurality of files comprises:

accessing a plurality of files comprising audio data.

16. (Original) The method as described in claim 9 wherein said establishing a redundancy standard comprises:

determining a range of frequencies in a pattern of frequencies from a Fast Fourier Transform for comparison of said fingerprints.

- 17. (Original) The method as described in claim 9 and further comprising: appending a fingerprint as metadata to at least one directory listing.
- 18. (Original) The method as described in claim 9 and further comprising:

 cataloging in a database said fingerprint with the file from which said fingerprint was generated.
- 19. (New) The method as described in claim 9 and further comprising: obtaining said plurality of files from a caching server utilized as part of a video streaming network.
- 20. (New) The method as described in claim 9 and furthrer comprising: providing a master database upon which video files are stored for video distribution; and

wherein said accessing a plurality of files comprises accessing a plurality of video filed stored on said master database.
